

1 in 3

workers has an undetected cardiovascular risk factor.

Most are identified for the first time at their annual occupational health visit — or not at all.

2 min

full cardiac risk profile

No wearable. No gel. No ECG leads.
Works on any smartphone.

THE CHALLENGE

- **Invisible burden** Hypertension, elevated BPM, and poor HRV are asymptomatic — workers don't feel them, and traditional check-ups rarely catch them in time.
- **Workforce cost** Cardiovascular events are the #1 cause of sudden death at work in France. Early detection cuts downstream medical costs by 30–50%.
- **Triage gap** SST providers conduct millions of annual visits. Without scalable screening tools, cardiac risk stratification depends on referral — slow, costly, incomplete.

HOW AISTETH WORKS FOR YOUR TEAMS

 Digital Stethoscope FDA 510(k)-cleared hardware captures heart & lung sounds for auscultation support.	 Camera Vitals Scan Face & finger scan delivers BPM, HRV, and respiratory rate — smartphone only.	 SCORE2 Risk Scoring ESC 2021-validated 10-year cardiovascular risk. Clinically accepted — no additional clearance.	 Family Monitoring Workers share data with dependents. Aging-parent monitoring included in the platform.

PLUG INTO YOUR EXISTING BILAN DE SANTÉ

- 01 Worker opens AiSteth on their smartphone before or during the visit.
- 02 40-second dual scan (face + finger) captures cardiac vitals automatically.
- 03 SCORE2 risk score generated. Médecin du travail reviews a one-screen summary.
- 04 High-risk workers are flagged for follow-up or GP referral — in seconds, not weeks.

WHY SST PROVIDERS CHOOSE AISTETH

- **Zero hardware cost** — Works on workers' own phones
- **No CE MDR required** — Wellness & triage — cleared for use today
- **GDPR-compliant** — Data never leaves the secure platform
- **Pilot in 4 weeks** — We handle onboarding end-to-end

Request a free 30-day pilot for your SST network

We onboard your team, configure risk thresholds, and handle compliance. No commitment beyond the pilot.
